Admin Site Comments.

On my laptop MacBook Pro.

When adding an item photos are not going accross to website. I tried differnt sizes but still no joy. If you go to cattagories and click onto 24 bass you can see no pics.

Any chance of being able to put a product on my website without a price as I do supply bespoke beltrami accordions which are price on application. It appears that when adding an item I have to put in a price.

On my iPad

Cannot still use the text box this is very important to me and was one of the reasons I went for the upgrade.

CMS problem on "Home" I cannot scroll down the text box
